Are there any other particular Risks?

Risks that could affect fund performance and are not necessarily fully reflected in the risk and reward rating include:

- **Liquidity risks:** The Sub-Fund may invest part of its assets in less liquid securities. Those are securities that cannot easily be sold or exchanged for cash without a substantial loss in value in certain market conditions. Those securities also cannot be sold quickly because of a lack of ready and willing investors or speculators to purchase the asset.
- **Counterparty risks:** The Sub-Fund can conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it can no longer or can only partly settle unpaid debts owed to the Sub-Fund.

- **Credit risks:** The Sub-Fund may invest a portion of its assets in debt securities. The issuers of these debt securities may become insolvent, which will mean that the securities will lose all or some of their value.
- **Risks from the use of derivatives:** The Sub-Fund may use financial derivatives instruments which will result in the Sub-Fund being leveraged and may result in material fluctuations in the value of the Sub-Fund. Leverage on certain types of transactions including derivatives may impair the Sub-Fund's liquidity, cause it to liquidate positions at unfavourable times or otherwise cause the Sub-Fund not to achieve its intended objective.

Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested resulting in the Sub-Fund being exposed to a greater loss than the initial investment.

- **Operational risks:** The Sub-Fund may fall victim to fraud or criminal acts. It may suffer losses as a result of misunderstandings or mistakes by employees of the Management Company or by external third parties or may be damaged by external events, such as natural disasters.
- **Sustainability risk:** This risk is any environmental social or governance event or condition that could impact the value of investments. The Investment Manager primarily relies on its ESG analysis and climate risk indicators to categorise the potential level of Sustainability risks in each fund. The level of sustainability risk may fluctuate depending on which investment opportunities the Investment Manager identifies. This means that the fund is exposed to Sustainability Risk which may impact the value of investments over the long term.
